PROJECTS

[Rock Paper Scissor ↗](#)

Jul 2024

A Rock, Paper, Scissors project using HTML, CSS, and JavaScript involves creating a simple web-based game where users can play against the computer. HTML structures the game with buttons for Rock, Paper, and Scissors, while CSS styles the game to make it visually appealing. JavaScript handles the game logic, including generating the computer's choice, determining the winner, and updating the game interface with the results.

[Tic Tac Toe ↗](#)

Jul 2024

A Tic Tac Toe project using HTML, CSS, and JavaScript creates a classic 3x3 grid game where two players take turns to mark spaces with X or O. HTML sets up the game board structure, CSS styles the grid and marks, and JavaScript manages game logic, such as checking for win conditions, handling player moves, and updating the board with the game status.

[Amazon Clone ↗](#)

Jul 2024

The Amazon clone utilizes HTML and CSS to create a clean, grid-based homepage with responsive product cards. It includes a fixed navigation bar for easy access to key sections like "Home" and "Cart." Each product card features an image, title, price, and "Add to Cart" button, enhanced with hover effects for improved interactivity.
